## 1. Organization Overview:

- ❖ Name: Spacebotics
- ❖ Space Bots was founded in 2018 by a team of college students majoring in robotics engineering, electrical engineering, software development, and physics. The company launched a single mission to prevent the physical dangers of human space exploration through autonomous and assisting astronaut robotics. Also play a role in making humans multiplanetary, assist future moon, mars and beyond missions.
- ❖ Our mission and vision are to develop, advance, and innovate the hardware and software used in space exploration, conducting scientific experiments and research with the goal of understanding the entire solar system and everything it is composed of. Furthermore, we aim to assist astronauts in future missions to the Moon, planets such as Mars, and beyond, while also educating people, and sharing research data and findings.
- ❖ Target audience: Aerospace companies and space agencies seeking advanced autonomous systems, hardware, and software solutions to enhance crew safety and mission efficiency.

## 2. Website Goals and Objectives:

- ❖ The primary goals and objectives of our website are to spark people's imagination, create excitement, and build widespread interest in space exploration while providing valuable information, showcase our hardware. To achieve this, the platform will share deep insights into how these advanced robotic machines assist in making human civilization multiplanetary, while actively educating the public on the Moon, Mars, the entire solar system, and beyond, specifically highlighting Mars as the only planet like Earth. Ultimately, the site will serve as a secure informational hub designed to provide users with quick, reliable access to critical space science and research data.
- ❖ To measure the success of the platform, the key performance indicators (KPIs) will focus on maintaining and leveraging a 4.5-star rating on Google Reviews with positive community comments, alongside actively monitoring and managing public reputation across consumer platforms like HelloPeter. Additionally, the site will track the consistent growth of regular users buying our merch, and engagement through submission volumes on the "Contact Us" tab.

## 3. Proposed Website Features and Functionality:

- Home page, about us, gallery, merch, spacebots, contact us.

#### 4. Design and User Experience:

- Color Scheme: Black, grey and white
- Typography: Aptos
- Layout and Design: A modern, minimalist, and straightforward interface that eliminates clutter.
- Top-bar navigation menu allows users to jump instantly between the hardware, and the merchandise store.
- Home page

#### 5. Technical Requirements:

- Registered domain name will be: spacebots.co.za | Initially hosted via GitHub Pages for zero-cost deployment. | Automated HTTPS encryption provided by default via GitHub infrastructure. | Hyper Text markup language for content and web site structure. CSS for styling, color and JavaScript for the functionality.
- **HTML5:** For content and website structure.
- **CSS:** For custom styling, colour layout, and responsiveness.
- **JavaScript:** For front-end user interactivity and functionality.

- **Hardware:** HP laptop used for all tasks.
- **Coding:** VS Code used to write web tags and code.
- **Preview:** Live Preview extension installed in VS Code to view the site.

## 7. Timeline and Milestones:

- **Week 1 (Research & Preparation):** First week doing research, gathering and sorting assets such as images and information.
- **Week 2 (HTML Structure):** Second week with developing the file structure and html structure while writing the necessary content needed for all web pages.
- **Week 3 (CSS Implementation):** Third week would be implementing the styling of the web pages by incorporating CSS code.
- **Week 4 (JavaScript Interactivity):** And the fourth week would be adding the functionality of the site using Javascript.
- **Week 5 (Finalization & Launch):** And the final week would be testing, deployment, hosting and fees needed such as database and domain name.

## 8. Budget:

- External Hosting Options: R100 for alternative web app hosting and user data storage packages via Host Africa WordPress Hosting.
- Third-party integration via [PayFast Fees Structure](#) for secure public donations or transactions: Credit/Debit Card Fees: 3.2% + R2.00 per successful transaction.
- Instant EFT Fees: 2.0% + R2.00 minimum per successful transaction.
- **Total:** R3 000
